Erratum: Figure 1.8 and accompanying caption

Figure 1.8 on p26 shows X-rays as located beyond the red end of the spectrum of visible light. This is an error. X-rays, like ultra-violet rays, are located beyond the blue (short wave-length) end of the visible spectrum. Infra-red rays, not shown in this figure, are located beyond the red (long wave-length) end of the spectrum of visible light. This error is repeated in the figure caption. In addition, the figure should give ‘nm’ or nanometres, as the units of measurement for the wavelengths shown.
